Moon Dental SPA Program as a Recall System for Dental Implant Patient

Eun-Soo Moon

Moon Dental Hospital, Korea

Dental implant has been known as a wonderful and successful technique for replacing such prosthodontic rehabilitations as bridge or denture. It should be very important to get the concept for maintaining the implant materials longer as well as to insert the material to the bone with sound state. Unfortunately, a lot of cases have been reported to fail of the implant because of the peri-implantitis or alveolar bone loss and nowadays, the majesty cases of dental dispute would be dental implant problems in Korea.

Moon Dental SPA program at Moon Dental hospital has been established in order to solve the problems of the gingivitis around the implant through the periodic care after dental implant treatment with periodic recall system, contracting with all implant patients, at Moon dental hospital.

Such items of preventive cares as oral hygiene education, proper tooth-brushing instruction and periodic scaling should be supplied to all patients for dental implant and such special cares as tooth-pik method of special tooth-brushing introduced by Dr.Watanabe, Professional Mechanical Tooth Cleansing (PMTC) and oral micro-organism test to find some oral micro-organism test influencing with peri-implantitis through the gene analysis method would be done according to the patient oral situations.

We have some good results for oral health care to dental implant patients with Moon dental SPA program at Moon dental hospital, it would be introduced on the symposium session of the conference.
